Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a method for measuring or trimming, respectively, the impedance of driver device, classified in class 324, subclass 713.
- II. Claims 13-16, drawn to a semiconductor device testing apparatus, classified in class 324, subclass 765.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as a process for testing a semiconductor memory having test mode circuit.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art by their different classification and because the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
